

Support Your SAP S/4HANA Transformation Journey

NTT DATA Implementation Services for SAP S/4HANA

Benefits:

- 30 years of automotive industry experience
- NTT DATA designed add-ons and playback scripts
- SAP S/4HANA best practices knowledge
- Auto industry-specific process configuration
- Client-specific data migration mapping tables

You've decided that it's time to transform your organization's enterprise resource planning platform to SAP S/4HANA. You may even have gotten approval from your board to kick off this initiative and are starting the planning phase. Still, while planning your transformation, you need to ask yourself:

- How can you ensure that you get the maximum value from S/4HANA?
- How can you avoid having to reinvent the wheel with proven best practices for the automotive industry based on years of experience?
- How can you safeguard the success of your project and remove the risk associated with set timelines and budgets?

A trusted partner can help you find the value in SAP S/4HANA implementation or SAP ECC to SAP S/4HANA migration and make the next steps on your journey.

Executing the transformation to SAP S/4HANA

NTT DATA Implementation Services for SAP S/4HANA can help you:

- Perform a **technical migration** from SAP ECC or Suite on HANA (SoH) to SAP S/4HANA
- Implement SAP S/4HANA based on NTT DATA's template for the automotive industry using our best practices — **greenfield implementation**
- Perform a technical migration, combined with the re-implementation or refinement of select business processes or customizations — **brownfield implementation**
- **Review** an already completed SAP S/4HANA transformation, helping you enable narrowly targeted improvements of functionality and business processes

NTT DATA's approach to implementing SAP S/4HANA — greenfield approach

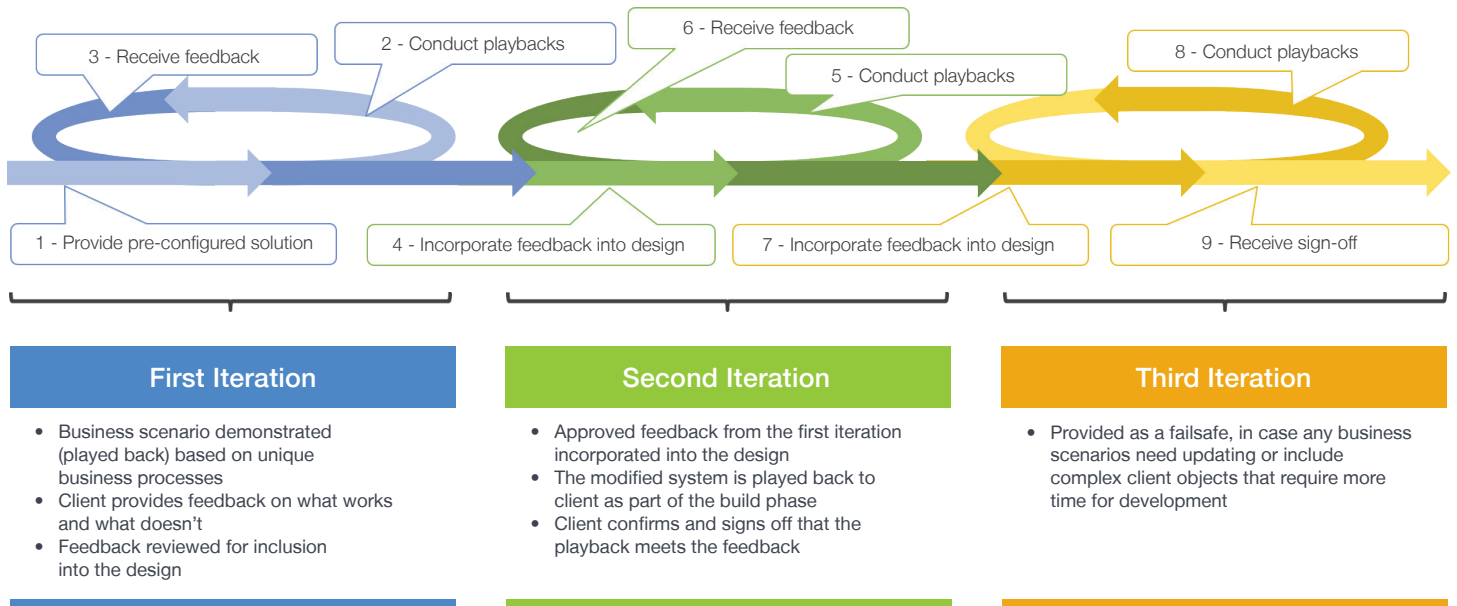

Our playback approach

NTT DATA has designed and recommends a "playback" implementation approach that's akin to SAP's Activate methodology but with significant refinements. As part of our approach, we use our automotive template and play it back to you, asking, "Why would this business process not work for you?" As a result, we're able to focus on the exceptions.

NTT DATA Implementation Services for SAP S/4HANA

This accelerates the overall timeline, ensures that best practices are implemented, and minimizes customizations and enhancements.

Your feedback to these playbacks leads to design changes that, once approved by a design review board, are implemented and then followed by another playback iteration to confirm the design changes.

Our template for the automotive industry

Built with SAP S/4HANA at its core, our template for the automotive industry includes extensions for smart operations such as internet of things integration, sales and operations planning (including solutions for production and inventory planning), predefined electronic data interchange (EDI) messaging to run EDI as a service, and vendor portals, to name only few.

Our automotive industry template is based on industry and other best practices as defined by SAP. NTT DATA has also added industry-specific intellectual property in the form of add-ons to the SAP best practices that reflect our rich history of implementing SAP in the automotive industry. Examples include CAPA and 8D processes, vendor portals, execution cockpits and predefined label templates.

NTT DATA's template is available through our cloud environment to kick-start your project, or your fit-gap assessment, as part of your pre-project roadmap development initiative.

Our template includes not only a preconfigured system but also a Microsoft SharePoint-based prepackaged solution that contains system documentation, process flows, test scripts and playback scripts.
