

Behind every successful Digital start-up is the scale, pace and ambition of an innovative partner

Many digital-native start-ups have exploded onto the scene in Ireland in recent years. Armed with disruptive business models and without legacy systems holding them back, they have emerged from nowhere to reach the status of major players at enormous speed.

As these disruptive innovators mature, the challenges come flooding in; how to maintain the monolith, pivot to open architectures, create frictionless experiences through acquisitions and more. These are familiar challenges to us and we relish in maintaining your pace and ambition while protecting your legacy and enabling your future ambitions.

It's a hope for most companies to deliver continuous daily improvements, yet our customers enjoy delivering 1,500 releases per month. Where an improvement in service and capability for their digital customers can be ideated, designed, tested with the market, coded and released for public use within a day.

We get it, you're more digitally savvy than most other players, but since when did the market standstill? We see it is our job to stay current and embrace the fastest moving methods, designs, tech, infrastructure and talent to keep you staying ahead of your competition.

We can answer your key challenges

Your journey is fast-moving and incredibly exciting. You are building the future. Yet such rapid growth brings its own challenges. Some of the key enablers of future expansion threaten to hold you back as your rapid growth continues. NTT DATA's strong track record of working with some of Ireland's largest and most complex organisations across multiple industries means we're perfectly positioned to understand the problems you face today.

Tackle the skills shortage and build up your new hybrid workforce: Attract and onboard niche talent. Retrain and upskill existing employees in key areas. Improve your employee experience and reduce attrition.

Optimise your cloud spend and embrace multi-cloud strategies: Reduce and manage your cloud spend. Improve resilience, reliability, performance and data security, all while minimising vendor lock-in.

Use automation to streamline operations and accelerate time to market: Enable faster growth and boost efficiency by establishing an automation roadmap and building centres of excellence to deliver it.

Rationalise technologies to control technical debt: Short-term gain often results in long-term pain. Avoid the cost and the cost of legacy IT as your technology evolves.

Target sustainability and map your path to net zero: Adapt to the changing regulatory landscape and meet the growing expectations of your employees, customers and investors.

Adopt a human-centred approach to deliver the best experience for customers and employees: Move from digital transformation to human-centred transformation to future-proof your business.

Deploy best-practice security solutions that go beyond compliance: Protect your organisation from current and emerging threats in the era of 'never trust, always verify'.
