

Cybersecurity in action

Our comprehensive AI-led, platform-first cybersecurity give organizations a competitive edge

Ignite
tomorrow_____today.

How we're helping clients turn cybersecurity into a business advantage

Cybersecurity that enables bold innovation

Robust security controls are essential for protecting business assets and data. They give organizations the freedom and confidence to innovate and explore new opportunities.

Simplify cybersecurity

Our AI-led, platform-first approach rationalizes disparate, legacy security technologies and disjointed operations into standardized future-proof cybersecurity programs.

Secure your technology landscape

Our full-stack capabilities, including data center, network, private 5G technologies and full lifecycle services, ensure unrivaled ownership of security outcomes that drive your success.

Large financial institution

Managed Extended Detection and Response streamlined siloed controls and boosted ROI.

8 security domains

Global manufacturer

Comprehensive OT security protected critical infrastructure and reduced operational costs.

Complete visibility of a complex, globally distributed OT environment

Fewer false alarms = a more productive security operations

We collaborated with stakeholders to design and implement OT security at all global production sites.

Grow your business

Empower your business to seize new opportunities for innovation and growth by securely enabling digital transformation and technology innovation.

Global manufacturer

Modern security infrastructure built cyber resilience and lowered resourcing costs.

35% reduction
in internal threat risks

40% saved
in resourcing costs through managed services

Multiple acquisitions had resulted in a fragmented IT and OT infrastructure. We guided the manufacturer through their security transformation.

Meet boardroom priorities

We help risk and security leaders simplify the way they report on complex security policies and controls by using scorecards that clearly align risk management and resilience outcomes with the organization's strategic objectives.

Leading US manufacturer

Cybersecurity operations outsourcing kept manufacturing processes running and protected reputation.

The security program engaged specialists in architecture, engineering and automation

Faster and more accurate detection, response and mitigation

Automated and future-proofed cybersecurity services support critical business outcomes and ensure higher levels of cyber resilience.

Meet the security demands of a fast-changing world

Navigate change confidently by continuously adapting your security posture to a dynamic threat landscape, regulatory requirements and emerging technologies.

Global consumer goods company

Modern security infrastructure built cyber resilience and lowered resourcing costs.

5x

increase
in log visibility

70,000

endpoint logs
collected and analyzed

1TB

of log data
managed daily

NTT DATA's security information and event management service is a fully managed solution for collecting, analyzing and reporting threat data.
