

Intelligent, future-ready networks

NTT DATA's Managed Network Services

Your network is the backbone of innovation and digital success

Intelligent networks enable you to swiftly adopt new applications and workloads, minimize technical debt, deliver outstanding user experiences and gain a competitive edge.

NTT DATA's Managed Network Services, part of our integrated Cloud and Security portfolio, help you build secure and intelligent networks that meet your present and future needs, and perfectly align with your business goals.

Backed by our cloud-native, AI-powered platform, our services integrate advanced automation, AIOps and deep analytics to deliver comprehensive visibility and unlock deep insights, enabling you to proactively address issues before they impact your business.

We leverage our deep expertise, global teams, vast connectivity and edge infrastructure to transform your network and deliver the results your business requires.

You receive tailored solutions that improve performance, reliability and innovation to meet your business needs.

Build future-ready networks tailored to your business needs

NTT DATA's Managed Network Services provide tailored solutions to optimize network performance, enhance security and streamline operations. Our suite of offerings and industry-leading platform support your network modernization journey from edge to cloud.

Whether connecting offices, implementing private 5G (P5G) or cloud strategies, modernizing wide area networks (WANs), linking global sites, securing IoT ecosystems or transitioning to a consumption-based model, we ensure seamless integration across all environments. This creates a smooth experience, eliminates friction and drives your organization to scale, innovate and operate with unmatched agility.

“Our suite of offerings and industry-leading platform support your network modernization journey from edge to cloud.”

Your network transformation powered by our solutions and AI-first, cloud-native platform

Managed Campus Networks	We design, deploy, and manage software-defined, cloud-enabled networks across campuses, branches, and hybrid workspaces—covering LAN, WAN, SD-WAN, and private 5G.
Managed Internet Connectivity	We procure, deliver and manage last-mile internet connectivity solutions for your organization.
Managed IoT	We manage and monitor your IoT ecosystem, including sensors, devices, applications and communications infrastructure.
Managed Network Security	Comprehensive security services — including managed secure access service edge (SASE) and advanced security solutions.
Network as a Service	We own, operate and transform your network. Our consumption-based model means you pay for what you use and achieve the outcomes you expect.

One NTT DATA Platform

Cloud-native, AIOps platform for simplification and visibility

Our cloud-native, composable platform streamlines network management with predictive AI, AIOps, automation, analytics, GenAI and service management — enabling proactive issue resolution and faster response times.

Unified Client Portal

A single window to monitor and manage network health

A unified, self-service portal offering real-time network visibility, customizable analytics, and role-based access. Users can monitor performance, raise tickets and manage issues efficiently — all from a single interface.

SPEKTRA Edge

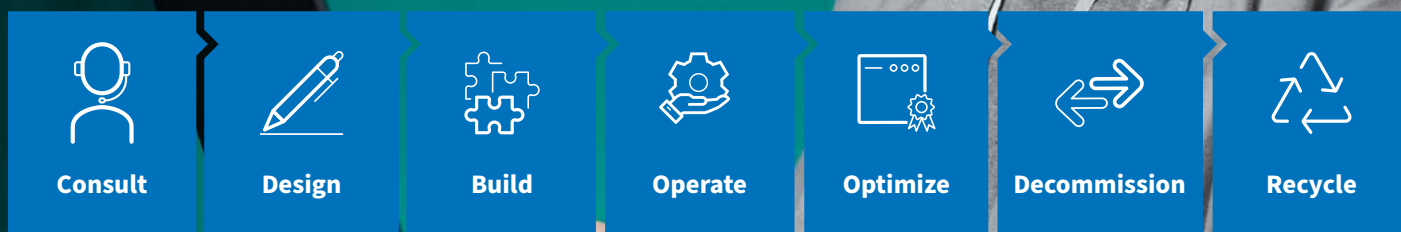

Expanding and integrating your edge ecosystem

Our edge device simplifies edge and IoT management with zero-touch provisioning, edge computing, IoT gateway functions, and AI inference—seamlessly integrating to enable intelligent, automated edge networks.

Supporting you throughout your network transformation

We offer end-to-end services that span consulting, design, build, management, decommissioning and refresh — covering multivendor network hardware and software. Every touchpoint supports you at any stage of your network transformation journey, ensuring seamless integration and exceptional performance.

Technology-independent, full lifecycle services to plan and optimize clients' network investments

Flexible service delivery that meets your business needs

Our variety of delivery models offer unmatched flexibility and scalability to meet your needs. With ISO-certified operations and thousands of network engineers in our global operations centers, you'll receive unparalleled technical expertise and 24x7 direct support.

People-augmented delivery

We use your existing tools and our experts to provide customized services that meet your specific requirements.

Hybrid delivery

This model combines human expertise with advanced technology to adapt to your changing needs.

Technology-augmented delivery

This approach uses automation and advanced platforms to drive significant improvements in your network operations.

Our services in action

BMW Group relies on NTT DATA to operate their global network

Our partnership gives the BMW Group the peace of mind that their business-critical network and server infrastructure is in good hands. Across 40,000 network devices, 260,000 ports and 30,000 servers, we have exceeded service quality expectations, enhanced operational stability and contributed to ongoing innovation.

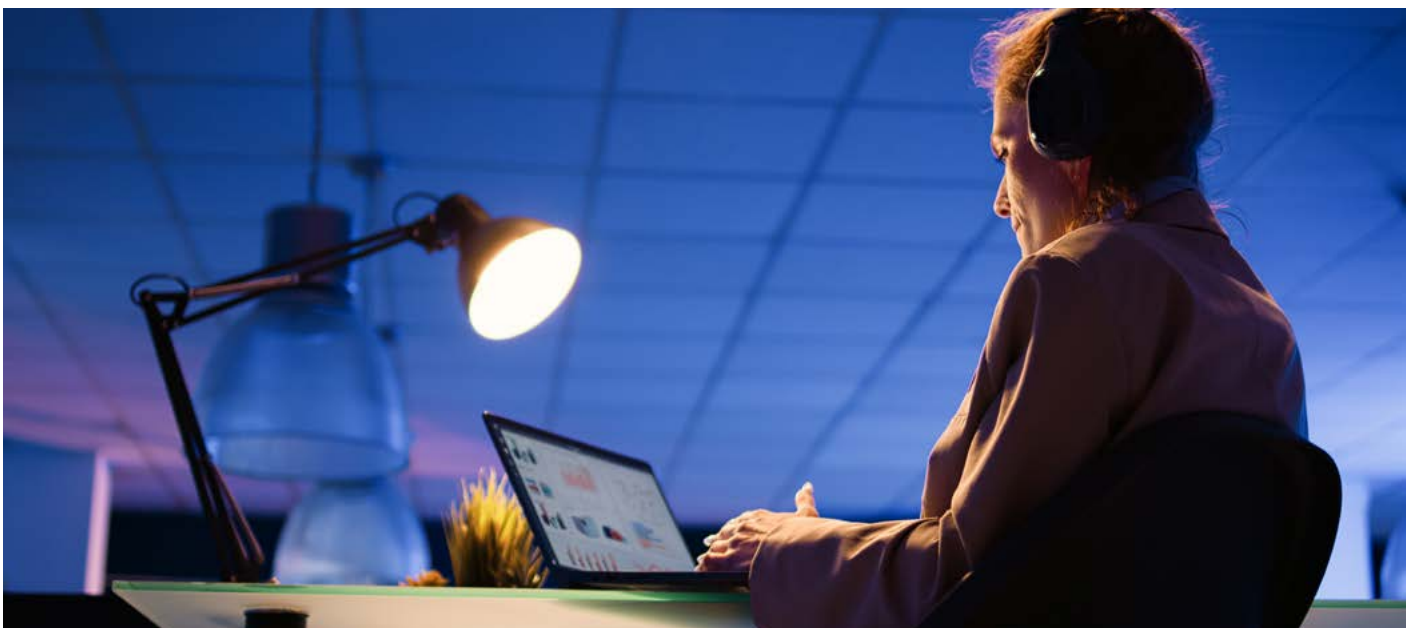

Mondi securely links their business operations in five continents

For Mondi, a UK-based manufacturer, the network is the backbone of their business. NTT DATA has connected and secured their manufacturing facilities in over 30 countries and 100 locations. Mondi has full network visibility, with our global team providing continuous monitoring and support to ensure optimal performance and security.

Pick n Pay achieved 24x7 connectivity and boosted its turnover

The Pick n Pay Group is a leading retail company in South Africa, with more than 1,200 stores. Keeping the network on is challenging due to frequent rolling blackouts. They partnered with NTT DATA to connect their physical stores, offices and online retail sites with an SD-WAN solution that can adapt to power outages. This increased their turnover by 1% within the first six months.

Make your network a foundation for business innovation

Seamless infrastructure modernization

Move from outdated, end-of-life infrastructure to a modern, scalable network — with a tailored roadmap built around your current environment and future needs.

Built-in innovation and automation

Leverage automation and AI-driven operations to reduce tickets, boost performance and enhance user experience — all while managing costs.

Flexible delivery, on your terms

Whether you rely on people, platforms or both — we meet you where you are. Our delivery model evolves with you, with what your business needs.

Always-on, integrated operations

Unified network and security management, 24x7 support and proactive issue resolution, keeps your business running — securely and smoothly.

Visibility that informs action

Real-time insights into performance, behavior and risks help you act quickly, optimize continuously and plan effectively.

Global strength, local expertise

Our global scale comes with a local presence. We bring in-country teams who understand your business and requirements — ensuring relevance and responsiveness.

Why NTT DATA

Real innovations for real results

NTT DATA is part of the NTT Group, which invests over \$3.6 billion each year in R&D. We're pioneering technologies like the All-Photonic Network, digital twins, agentic AI and post-quantum cryptography. These innovations boost current performance and build future resilience.

The most complete edge infrastructure

A global Tier 1 IP backbone, mobile virtual network operator (MVNO) and P5G capabilities, a vast data center network and smart venue solutions all work together to ensure high-performance connectivity, so your business can scale without limitations.

Extensive expertise and scale

With over 50 years of networking experience, thousands of deployed networks and 5,000 engineers, we bring proven reliability in providing and supporting business-critical infrastructure.

Full-stack portfolio

We offer end-to-end services across connectivity, cloud, security, networks and collaboration, simplifying vendor management and accelerating innovation. We enable you to focus on outcomes, not integration.

Platform-driven approach

By unifying hardware, software, policies and APIs, our platform streamlines operations and enhances agility, so your IT can move faster, adapt easier and deliver more business value.

Global partnerships

Our partnerships with leading original equipment manufacturers (OEMs) provide access to over 60 technologies and APIs, enhancing platform integration and offering deeper insights into your digital ecosystem.
