

Managed Extended Detection and Response (MXDR)

Improve business resilience
with AI-powered analytics and
threat intelligence

Strengthen cyber resilience in the face of evolving security challenges

CIOs, CISOs and CROs are faced with a new class of security challenges. At the top of the list are sophisticated AI-driven threats, expanding digital footprints, responding to new, supply chain-centric attacks and identifying skilled resources to monitor elusive threats in their environment.

Our platform integrates threat intelligence from multiple sources, leveraging native sensors that are deployed on-premises and in the cloud. This highly modernized platform is backed by skilled and dedicated Information Security Managers (ISMs), digital forensic experts and certified security professionals.

Comprehensive security with automation at its core

With NTT DATA's MXDR, organizations can proactively contain breaches and attacks, protect their brand's reputation and drive customer loyalty, contributing to overall business performance.

Our service includes:

- **24x7 security monitoring and detection** with advanced analytics to reduce the mean time to detect (MTTD) threats
- **Threat hunting**, using security analyst-driven investigation and disruption of attacks using our threat-hunting capabilities
- **Response**, using security orchestration, automation and response (SOAR) to reduce mean time to respond (MTTR)
- **Endpoint protection** through the rapid deployment of fully managed endpoint detection and response (EDR), alert detection and remote isolation capabilities
- **Playbook as a service**, creating and managing playbooks to improve detection efficiency and response times
- **Digital forensics and incident response (DFIR)** for incident response support in the event of critical incidents
- **Threat intelligence** services such as phishing protection, digital risk protection service and tailored threat intelligence reports to protect against the ever-changing threat landscape

NTT DATA's Managed Extended Detection and Response (MXDR), underpinned by the Palo Alto Networks Cortex XSIAM solution, helps security teams better understand the frequency and complexity of attacks, and shelters them from chasing time-consuming benign alerts or false positives.

“

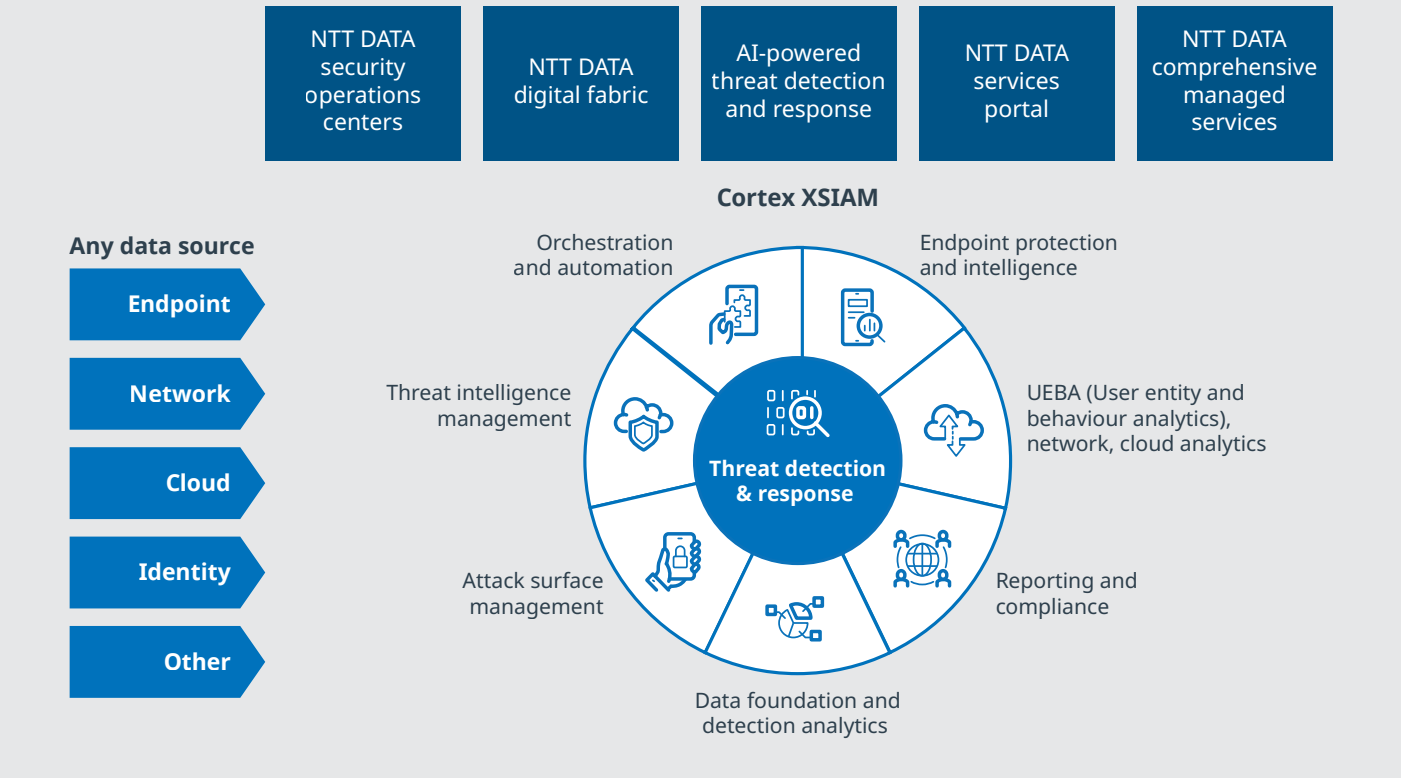

Move from reactive compliance to proactive resilience.”

Why NTT DATA

We bring global expertise, industry-leading frameworks and a scalable platform to help you move from reactive compliance to proactive resilience.

- **Extensive track record**
We mitigate 2 billion security threats every year.
- **Full lifecycle**
We turn goals into outcomes through a lifecycle of services.
- **Next-generation analytics capabilities**
Our advanced analytics are based on decades of ML algorithm development and threat intelligence.
- **Global scale**
We deliver services in over 200 countries across 5 regions.

Speed up response times with a modern approach to security operations

MXDR service tiers at a glance

Silver • 24x7 incident detection and response • Compliance gap analysis • Target threat hunting	Gold • All aspects of silver tier • Custom playbook • Cloud detection and response	Platinum • All aspects of Gold and Silver tiers • Attack surface management • Phishing protection

Top 4 platform capabilities

Resilience

End-to-end integrated and automated services secure digital transactions, protect information and data, and safeguard against downtime to ensure workforce productivity.

Improved speed and efficiency

Orchestration, automation and AI-driven threat intelligence and digital forensics enhance response times and reduce manual effort.

Less complexity

A unified view of security across your organization provides clear, actionable insights.

AI-driven intelligence

Intelligence from the MXDR platform, and through our 24x7 security operations centers, improves the detection of hard-to-find and advanced threats.

“Shifting our approach to MXDR reduced the impact of security incidents.”
