06 About NTT DATA

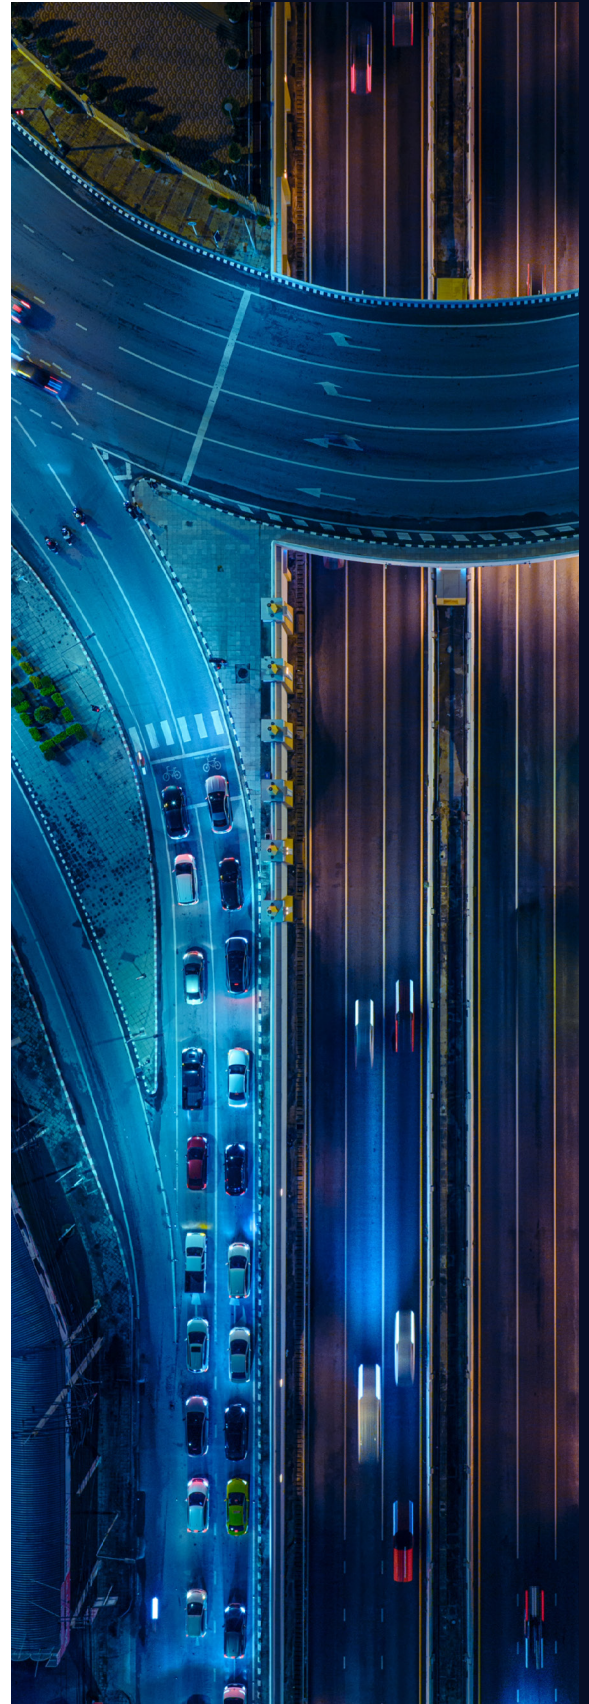

Securing a complex, multifaceted environment

Today, business performance is tightly integrated with its technology agility and resilience to support uninterrupted operations and maintain frictionless digital experiences for its stakeholders- from customers to suppliers and employees. At the same time the technology environment is becoming more complex and multifaceted from AI technologies to multicloud and hybrid environments and looming ahead is a quantum future. This makes a continuously evolving cybersecurity posture a critical aspect of every organization's resilience and success, now more than ever.

In this context, simplified and integrated cybersecurity solutions are the key. And, through NTT DATA's partnership with Palo Alto Networks, we offer secure enterprise environments that strengthens your security posture, drives efficiency and build a competitive edge.

This spotlight showcases three client success stories powered by our **Managed SASE (Secure Access Service Edge)** solution — a fully managed, integrated cloud security platform designed to enforce zero trust principles, mitigate threats and simplify secure access across your organization. We are uniquely positioned to help our clients on their SASE journey from technology consulting and sourcing to adoption and professional services, and fully managed services.

SASE converges network and security functions into a single, cloud-native platform, enabling secure, high-performance access to applications and resources from anywhere. At its core, SASE embodies zero trust principles, which operate on the premise that no user or device is inherently trusted.

How SASE helps you simplify and integrate your cybersecurity

Securing today's complex, multifaceted enterprise IT environments calls for a simplified and integrated approach to cybersecurity, one that helps you:

- Enforce **zero trust security** across users, devices, applications and data
- Protect against **advanced threats** with real-time monitoring
- Simplify secure access for remote and hybrid teams
- Ensure compliance with global security standards
- Gain full visibility and control across your digital estate
- Reduce costs through streamlined, unified security management
- Accelerate growth with real-time visibility and control

Managed SASE in practice

Client story 1: Multinational beverage company

Business need

A global beverage leader with more than 160 sites across 70 countries needed to modernize their network while improving their security posture and user experience.

Solution

NTT DATA deployed **Managed SASE**, integrating AI-enabled security controls, zero trust enforcement and proactive threat management.

Outcomes

- 61% of stakeholders reported **improved or drastically improved security posture**
- 65% reported **enhanced network performance**
- Cloud-based security reduced the beverage maker's costs and improved agility
- Full visibility and control across thousands of devices

Client story 2: Global IP management provider

Business need

Our client needed to secure sensitive intellectual property data, prepare for cloud migration and reduce their total cost of ownership.

Solution

NTT DATA implemented:

- **Managed software-defined wide area networking (SD-WAN)** for optimized connectivity
- **Managed Prisma SASE** for unified network and security
- **Managed Detection and Response** for real-time threat containment

Outcomes

- A scalable, secure global network
- Reduced capex and improved threat resilience
- Secure access for remote users, even outside the virtual private network
- Faster breach containment and fewer false positives

Client story 3: Multinational natural-health company

Business need

Rapid expansion and acquisitions created security gaps and operational inefficiencies for a multinational natural-health company.

Solution

NTT DATA deployed our solution for **Managed Campus Networks with Prisma SASE**, delivering a unified zero trust platform tailored to diverse user needs.

Outcomes

- Fewer outages and emergency upgrades
- A strengthened security posture with full visibility
- Seamless integration of new entities into a secure environment
- Smooth transition to a managed security services model

Let's secure your competitive edge

Speak to our cybersecurity experts to find out how NTT DATA's Managed SASE can help you reduce risk, improve security, optimize costs and enable frictionless digital experiences and uninterrupted operations.
