

Mobicule lowers costs and drives expansion with NTT DATA Cloud

Client profile

Mobicule is a pioneering fintech independent software vendor (ISV), focusing on products that deliver mobile field force to India's biggest enterprises and financial institutions. They've successfully deployed and managed some of the largest mobile field force implementations across sales and distribution, telecommunications as well as banking, financial services and insurance. With a footprint across Asia, Africa and the Middle East, their vast domain experience enables them to deliver mission-critical field-force applications in various industries.

Facing rapid growth and rising demand for their software-as-a-service (SaaS) offerings, Mobicule needed a cloud platform that allowed them to scale on demand and optimize costs while ensuring that their cloud and infrastructure landscape met the most stringent security and compliance standards.

An NTT DATA hybrid cloud platform delivered the performance, efficiency and economy of scale that Mobicule needed to deliver a robust, secure and compliant SaaS offering to their customers. The cloud platform also allows Mobicule to consume cloud capacity on demand in a pay-as-you-go model, with access to cloud-native microservices, all managed and secured 24x7 by NTT DATA. Multiple availability zones allow Mobicule to deploy their services at the edge, as close to their customers as possible.

As a pioneer in a competitive market, we need to be nimble in order to maintain our early-mover advantage. To achieve this, we needed a cloud partner who could assume the role of a trusted adviser and deliver a cloud landscape that would enable us to create a robust, secure and cost-efficient cloud landscape for our SaaS offerings.”

Siddharth Agarwal
Founder and MD, Mobicule Technologies

Business need

Embracing a cloud-first approach to deliver SaaS

Mobicule Technologies is a leading enterprise mobility software company with products focused on debt recovery and collections, AI-based know your customer, key performance indicators and governance. How could they embrace a cloud-first approach to enable more agile and efficient ways of delivering their SaaS offerings to clients across India?

As Mobicule began to scale, so did the company's business challenges: rising cloud costs, increasingly stringent compliance requirements and challenges in adopting new technologies to deliver greater agility and efficiency.

Solution

Accelerating cloud modernization through managed services

The engagement began with NTT DATA conducting Cloud Discovery and Analysis sprints in conjunction with the Mobicule team to define objectives with clear outcomes. Over the course of these sprints, we were able to determine the optimal cloud execution venues for Mobicule's application landscape.

An agile, cost-effective and on-demand managed cloud landscape

Our SimpliCloud public cloud platform was chosen as the execution venue for Mobicule's application landscape. SimpliCloud allows Mobicule to deploy a range of infrastructure-as-a-service and platform-as-a-service solutions, containers and microservices, and seamlessly connect to other hybrid cloud or multicloud platforms as and when required. Virtual machines connect via a software-defined network to various on-demand network and storage services, including NTT DATA's on-demand load balancing, elastic block storage and object storage platforms.

Once designed and approved, the entire solution was deployed within NTT DATA's 24x7 managed service framework, which manages the entire stack all the way up to the application layer through a certified suite of people, tools and processes. This frees up Mobicule's resources to manage their suite of SaaS products and allows their team to focus their attention on creating competitive business advantages, rather than having to manage their cloud landscape.

Secure and resilient by design

Given that Mobicule's client base includes India's largest banks and nonbank financial companies, security and resiliency are an essential compliance need. NTT DATA spent time with Mobicule's team to assess the overall threat radar and implement a suite of threat protection and remediation measures to ensure maximum security. Resiliency is another key concern, met through our platform-based cloud resiliency services — which provide redundancy for all services within the primary availability zone — as well as our disaster recovery as a service, which provides a cold disaster-recovery service in an alternate availability zone for maximum resiliency.

Outcomes

Leveraging a cloud platform to bolster availability, performance and security

Cloud advisory

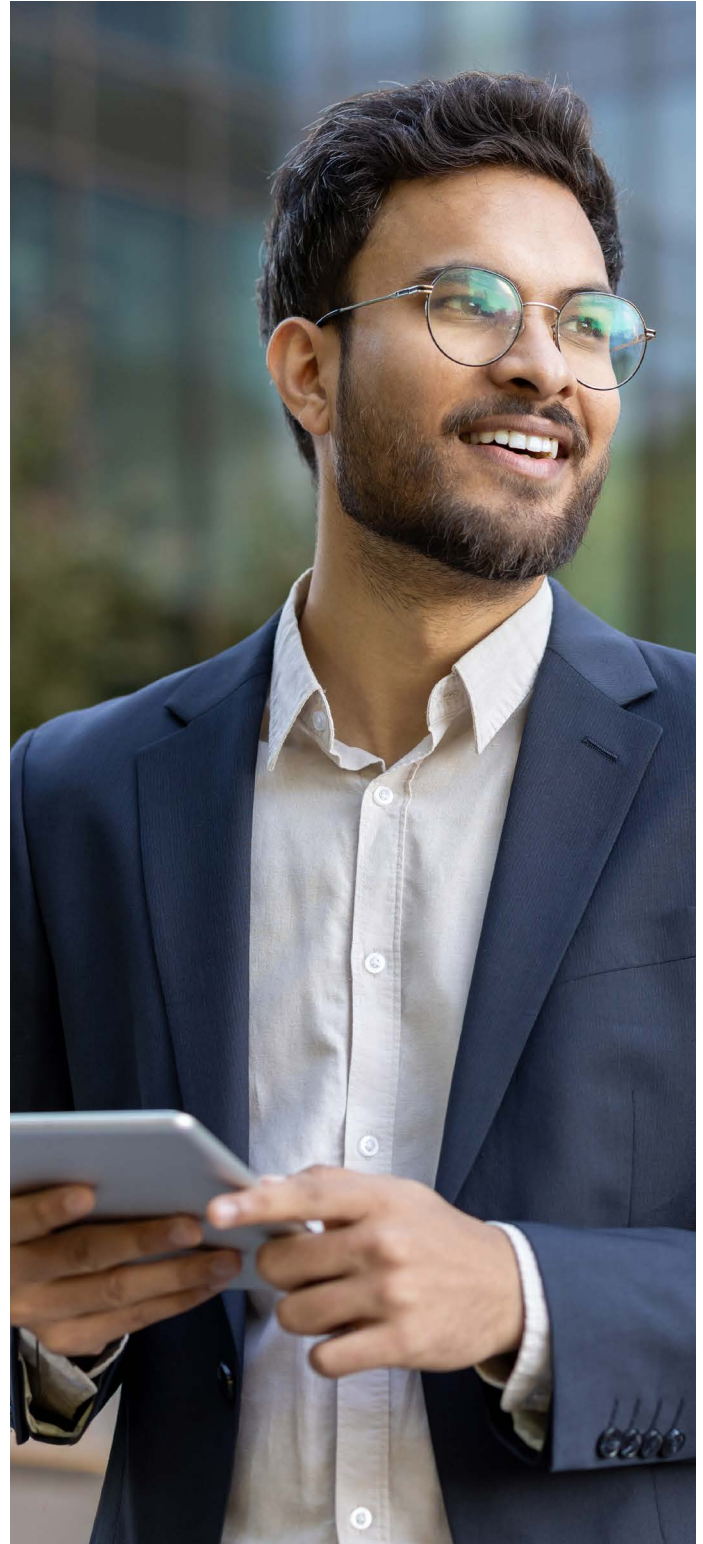

NTT DATA's solution-led sprint approach helped Mobicule identify the right cloud technologies to meet their business imperatives and select a technology roadmap that helps them select cutting-edge technologies to bolster the availability, performance and security of their application stack.

A managed, resilient and secure cloud environment

Adopting a managed cloud platform that is secure and resilient by design and supported by NTT DATA's around-the-clock managed service coverage framework, has helped Mobicule's developers and architects focus on building innovative products and services for their clients and frees up the time and effort needed to expand their offerings into new markets.

Cost efficiency

Going "cloud-first" can sometimes result in cost sprawl, but our hybrid approach ensures that Mobicule is able to optimize costs by over 40% compared to a pure public cloud approach.
